

Individual Contribution Statement

TripMate: A Tool-Augmented Travel-Planning Agent (PSIS Activity 2)

Group No.: _____ · Course: Generative AI (PSIS activity) · Activity 2: Tool-Augmented / Agentic LLM Application
Submission date: 30 September 2026

Instructions: replace the placeholders with each member's name and roll number, edit the contribution text so that it matches what each person actually did, agree the effort split as a group, and sign. For a group of three, merge the roles of Members 3 and 4.

1. Contributions

Member	Role	Specific contributions (files / tasks)	Effort	Signature
Member 1: <name, roll no.>	Agent & LangChain integration lead	Designed the agent with <code>create_agent</code> ; wrote the system <code>PromptTemplate</code> and grounding rules (<code>prompts.py</code>); added checkpoint memory, middleware (grounding guard, model fallback, call limits, tool errors) and the rate limiter (<code>agent.py</code>); built the LCEL itinerary chain with <code>PydanticOutputParser</code> and repair fallback.	25 %	
Member 2: <name, roll no.>	Tools & API integration	Implemented the six tools (<code>tools.py</code>) and the shared HTTP layer with retries, Retry-After handling, disk cache and outage simulation (<code>net.py</code>); investigated API behaviour (forecast horizon, ECB currency gaps, HTTP 204 holidays, geocoder ambiguity) and designed the fallbacks and the ambiguous-place guard.	25 %	
Member 3: <name, roll no.>	Testing & evaluation	Wrote 41 offline unit tests (mocked APIs, scripted fake LLM); designed the 10 live scenarios and automatic checks, including the numeric-grounding metric (<code>evaluation/</code>); ran five evaluation rounds and traced each failure found in the transcripts to a fix (<code>results/HISTORY.md</code>).	25 %	
Member 4: <name, roll no.>	UI, documentation & demo video	Built the Streamlit UI with tool traces, outage switches and offline replay, and the CLI; drew the architecture and sequence diagrams; wrote the README and technical report; scripted and recorded the demonstration video.	25 %	

2. Shared work

- Selecting the application and writing the Phase 1 proposal (all members).
- Reviewing each other's code and debugging the geocoding-ambiguity and Gemini-quota problems together.
- Reviewing the report and rehearsing the video.

3. Individual reflections (2-3 sentences each)

Member 1: _____

Member 2: _____

Member 3: _____

Member 4: _____

4. Declaration

We confirm that the contributions above are accurate and were agreed by all group members.

Date: _____
